1. GENERAL

Product description
- Self-cleaning automatic filter
- Separation of solid particles from low viscosity fluids
- Particularly suitable for filtering cooling lubricants in individually supplied machine tools
- Discontinuous filtration

Filter element technology
- Conical filter element
- Wedge wire: 30 to 1000 µm
- SuperMesh wire mesh, sintered: 25 to 60 µm

Product advantages
- Energy-optimised filtration and back-flushing principle
- Not dependent on pressure of filtrate
- Efficient alternative to a cyclone separator
- Compact design
- Simple structure
- Simple integration and flexible adjustment to suit machine tool
- Maintenance-friendly design

---

Legend
* Back-flush volume at a system pressure of 0.8 bar and a valve opening time of 2s.
2. FUNCTION

Filtration

- The medium being filtered enters the filter housing via the filter inlet and flows through the filter element from the inside to the outside.
- The filtrate leaves the filter via the filter outlet.
- As medium passes through the filter element, particles are deposited on the inner surface of the filter element and the differential pressure between dirt and clean side increases.

Triggering Back-flushing

After the time pre-set on the timer has elapsed, or by means of an optional differential pressure gauge, back-flushing starts automatically.

Phase 1 of Back-flushing: Stripping Away the Contamination

- The back-flushing valve is opened.
- Unfiltered fluid from the filter inlet above flows into the filter element.
- The conical filter element geometry generates a core flow that is mainly fed by the filter inlet.
- The core flow is supported by the free jet effect, which draws additional clean fluid from the filtrate side into the inside of the filter element.
- This in itself flushes away some of the deposited contamination.

Phase 2 of Back-flushing: Discharging the Contamination

- The JetFlush valve is closed above the filter element.
- The moving column of fluid draws water from the filtrate side as soon as the water supply stops as a result of the JetFlush reservoir closing.
- This causes even firmly attached particles to be stripped away effectively.
- The filtrate flow is interrupted during the cleaning process for roughly 3 seconds.
- After the JetFlush valve is opened, dirt is removed by means of unfiltered-fluid flow via the back-flush line.
- Once the back-flushing valve has closed, the filter returns to filtration operation.
3. FILTER CALCULATION*

**Maximum flow rate**
80 l/min

**Inlet pressure**
not less than 0.7 bar

**Application requirements**

<table>
<thead>
<tr>
<th>Filter rating</th>
<th>Pressure</th>
<th>Contamination load</th>
<th>Viscosity</th>
</tr>
</thead>
<tbody>
<tr>
<td>&gt; 25 µm (nominal)</td>
<td>≥ 0.7 bar</td>
<td>&lt; 200 mg/l</td>
<td>&lt; 10 cSt</td>
</tr>
</tbody>
</table>

**Integration**
The back-flush line of the filter must have a minimum length of 1 m. It must not have any kind of elevations / lifts and no back-pressure.
The outlet of the filter must be open, no non-return valve allowed and filtrate must be able to flow back.

* Please contact our Head Office if you have any queries regarding filter calculation.
## 5. MODEL CODE

**MODEL CODE AutoFilt® RF12**

### Filter type

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RF12-1</td>
<td>AutoFilt® RF12 size 1</td>
</tr>
</tbody>
</table>

### Protective filter

- **EP0** = electropneumatic control without pilot valves
- **EP1** = electropneumatic control incl. pilot valve 24V DC
  - Device connector DIN EN 175301-803 / form A (w/o mating connector)
- **EP2** = electropneumatic control incl. pilot valve 24V DC
  - Device connector M12x1 (w/o mating connector)
- **EP3** = electropneumatic control incl. pilot valve 230V AC
  - Device connector DIN EN 175301-803 / form A (w/o mating connector)
- **EPZ3** = electropneumatic control incl. pilot valve 230V AC,
  - with timer control (1 x 230V/N/PE 50 Hz)
- **EPD3** = electropneumatic control incl. pilot valve 230V AC,
  - with differential pressure control (1 x 230V/N/PE 50 Hz)

### Material

- **1** = filter housing: aluminium, internal parts: stainless steel

### Back-flushing valve

- **0** = without, G1" connection
- **CO** = coaxial valve, brass
- **KN** = ball valve, brass, nickel-plated
- **S** = piston control valve, brass

### Differential pressure monitoring

- **0** = without differential pressure monitoring
- **5** = 2x HDA 4700 stainless steel (4 – 20 mA)
- **7** = fixed value 0.5 bar. Type GW, n.c. contact

### Pressure range

- **10** = 10 bar

### Modification code

- **X** = the latest version is always supplied

### Filter elements / filtration rating

- **S** = preceded with an additional "S" for SuperFlush non-stick coating
- **KSS** = wedge wire 30 µm to 1000 µm
- **KSD** = SuperMesh wire mesh, sintered, 25 µm / 40 µm / 60 µm; others on request

### Drawing number

For special designs

---

Preferred variants highlighted in grey!
6. DIMENSIONS

The dimensions indicated have ± 10 mm tolerances. Subject to technical modifications.

NOTE
The information in this brochure relates to the operating conditions and applications described.
For applications or operating conditions not described, please contact the relevant technical department.
Subject to technical modifications.
